Build

Installing and Building Emergent

- Install from packages
  - Mac
  - Ubuntu
  - Windows
- Build from source (expert)
  - Mac
  - Linux
  - Windows
  - Build everything from source
- Packaging for release (dev team)
  - Mac
  - Ubuntu
  - Windows

*emergent* can be built from source on Macintosh, Linux and Windows so that you can build and run any particular revision and stay up to date with the latest changes.

- Each platform page includes instructions for building emergent from source using pre-built libraries and also instructions for building these libraries when needed.

Worst case, you can Build everything from source (e.g., on compute clusters with old OS's..)
